

EXECUTIVE CLASS UltraLOC™ Seat Recline Locks

The Best Choice for Executive Aircraft Seats

Enidine is a world leader in the design and manufacture of motion control and vibration isolation products for commercial and business class aircraft.

Enidine's Executive Series UltraLOC™'s are used by seat OEM's, FBO's and individual operators to provide effective seat recline and legrest extension to meet all seat model specifications.

Whether you are designing a new 16 G seat or replacing a competitor's seat recline lock for a spare, Enidine's UltraLOC™ provides unsurpassed quality and effective operation for your aircraft seating needs.

- Anodized aluminum body
- Lowest backlash in the industry
- Universal control cable interface
- State-of-the-art internal seal design
- Operational life expectancy of 50,000 cycles
- FAA required manual override safety feature
- PMA replacements – direct competitor interchanges
- 3.2 in.(81,3 mm) and 3.7 in. (94 mm) stroke lengths available
- Highest operational life expectancy and longest warranty in the industry
- Many "standard" designs available, or custom-made to your specification
- Hydraulic locks provide more consistent operating performance than gas locks over a wide temperature range
