ENGINEERED FOR LIFE

## We Solve It! Drop Down Stowage Bin Motion Control Solutions

For over 25 years ITT Enidine has been the preferred source for Actuation and Rate Control products for the airline industry. With advances in materials and design engineering, ITT Enidine revolutionized the industry with its first motion control unit on several commercial airline platforms for drop down stow bins in the late 1980's. Since that time our products have evolved as rapidly as passenger needs for more storage capacity and easier access.

### Load Compensating Rate Controls (LCRC)

- Utilizes a quick connect design for reduced assembly time and maintenance
- Compensates for bins loaded up to 100 lb. carrying capacity
- Several mounting configurations for various aircraft bin designs
- Consistent opening times regardless of the weight inside the bin
- Patent pending design for lift assist technology, supporting 20-25 lb. hand force requirement
